

The Hebrew University of Jerusalem

Parkinson's. Have we cracked it?

Scientists at **The Hebrew University of Jerusalem** are developing a unique pacemaker that will provide stimulation to the parts of the brain known to alleviate Parkinson's disease.

The Hebrew University is home to one of the world's foremost centres for brain research where, as well as 'turning back the clock' on Parkinsons, scientists have developed a robotic arm controlled directly by thought.

If you'd like to shell out to help researchers at the Hebrew University conquer diseases of the brain, call Julia at the **British Friends of the Hebrew University** on 020 7691 1474 or e-mail julia.markson@fhu.org.uk
